

# Assignment: Random Numbers

Vishal Vijay Devadiga (CS21BTECH11061)

## 1 UNIFORM RANDOM NUMBERS

Let  $U$  be a uniform random variable between 0 and 1.

- 1.1 Generate  $10^6$  samples of  $U$  using a C program and save into a file called uni.dat.

**Solution:** Download the following files and execute the [C program](#).

- 1.2 Load the uni.dat file into python and plot the empirical CDF of  $U$  using the samples in uni.dat. The CDF is defined as:

$$F_U(x) = \Pr(U \leq x) \quad (1.1)$$

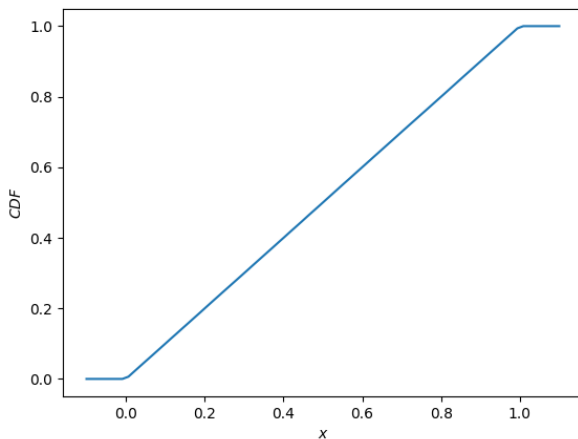

Fig. 1: The CDF of  $U$

**Solution:** The following [python code](#) plots Fig. 1

- 1.3 Find a theoretical expression for  $F_U(x)$ .

**Solution:**

- 1.4 The mean of  $U$  is defined as:

$$E[U] = \frac{1}{N} \sum_{i=1}^N U_i \quad (1.2)$$

and its variance as:

$$\text{var}[U] = E[U - E[U]]^2 \quad (1.3)$$

Write a C program to find the mean and variance of  $U$ .

**Solution:** Download the following files and execute the [C program](#).

- 1.5 Verify your result theoretically given that:

$$E[U^k] = \int_{-\infty}^{\infty} x^k dF_U(x) \quad (1.4)$$

**Solution:**

## 2 CENTRAL LIMIT THEOREM

- 2.1 Generate  $10^6$  samples of the random variable:

$$X = \sum_{i=1}^{12} U_i - 6 \quad (2.1)$$

using a C program, where  $U_i, i = 1, 2, \dots, 12$  are a set of independent uniform random variables between 0 and 1 and save in a file called gau.dat.

**Solution:** Download the following files and execute the [C program](#).

- 2.2 Load gau.dat in python and plot the empirical CDF of  $X$  using the samples in gau.dat. What properties does a CDF have?

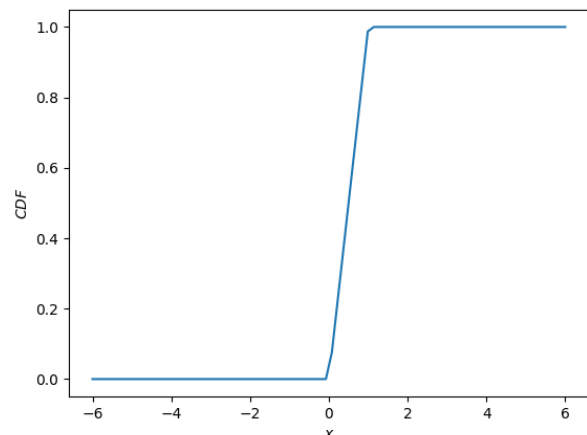

Fig. 2: The CDF of  $X$

**Solution:** The following [python code](#) plots Fig. 2

- 2.3 Load `gau.dat` in python and plot the empirical PDF of  $X$  using the samples in `gau.dat`. The PDF of  $X$  is defined as:

$$p_X(x) = \frac{d}{dx} F_X(x) \quad (2.2)$$

What properties does the PDF have?

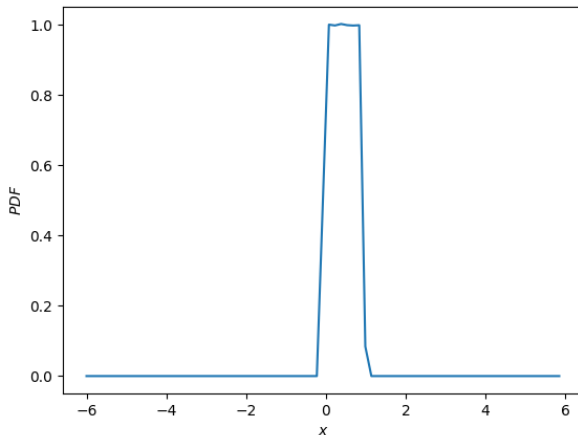

Fig. 3: The PDF of  $X$

**Solution:** The following [python code](#) plots Fig. 3

- 2.4 Find the mean and variance of  $X$  by writing a C program.

**Solution:** Download the following files and execute the [C program](#).

- 2.5 Given that:

$$p_X(x) = \frac{1}{\sqrt{2\pi}} \exp\left(-\frac{x^2}{2}\right), -\infty < x < \infty, \quad (2.3)$$

repeat the above exercise theoretically

**Solution:** Download the following files and execute the [C program](#).

### 3 FROM UNIFORM TO OTHER

- 3.1 Generate samples of:

$$V = -2 \ln(1 - U) \quad (3.1)$$

and plot its CDF.

**Solution:** Download the following files and execute the [C program](#) to generate the samples.

The following [python code](#) plots Fig.

- 3.2 Find a theoretical expression for  $F_V(x)$ .

**Solution:**
